

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (Currently Amended) A coding system for use in conjunction with a series of applicable products, the coding system comprising:

~~indicia indicating to a user of~~ on each product ~~[[in]] of~~ said series of products, the indicia including time indicia and sequence indicia, said time and sequence indicia providing a user of said product with a time and a sequence of use of said series of products, ~~[[the indicia including:]]~~ said time indicia disposed on a surface of each product of said series of products, said time indicia indicating to said user a ~~[[time of]]~~ portion of the day for using each product of said series of products and thereby enabling said user to select a group of products from said series of products having a common time indicia disposed thereon; and said sequence indicia disposed on a surface of each product of said series of products, said sequence indicia indicating to said user an order of using each product of said selected group of products during said ~~[[time of]]~~ portion of the day, thereby enabling said user to use said group of selected products in said order.

2. (Previously Presented) The coding system according to claim 1, wherein said time indicia includes at least one of:

a solar character enabling said user of said series of products to select a first group of products from said series of products which are to be used during the day; and

a lunar character enabling said user of said series of products to select a second

group of products from said series of products which are to be used at night.

3. (Previously Presented) The coding system according to claim 2, wherein said sequence indicia includes a series of ascending numerical characters, wherein said ascending numerical characters indicate to said user to use said products of each of said first and second selected group of products in an ascending numerical order.

4. (Previously Presented) The coding system according to claim 3, wherein said coding system is disposed on a series of labels, wherein a selected one of said series of labels is operatively associated with a respective product of said series of products.

5. (Previously Presented) The coding system according to claim 4, wherein said series of labels are applied to an outer surface of a container adapted to retain a respective product therein.

6. (Previously Presented) The coding system according to claim 5, wherein said container includes a product retaining portion having an open end and a cap configured and adapted to close said open end of said product retaining portion.

7. (Currently Amended) A coding system associated with a series of applicable products for performing a coordinated treatment, wherein each applicable product is contained in [[a plurality of containers]] an independent discrete container, the

coding system comprising:

~~indicia indicating to a user~~ on each container, the indicia providing a user of said series of applicable products with a time and a sequence of use of selected products of said series of products, wherein said indicia is associated with each product of said series of products, the indicia including:

time indicia disposed on ~~[[an outer surface of]]~~ each of said containers, said time indicia enabling said user to select a group of containers from said plurality of containers having a common time indicia for a particular ~~[[time of]]~~ portion of the day; and

sequence indicia disposed on ~~[[said outer surface]]~~ each of said containers, said sequence indicia indicating to said user a sequence in which to use said products contained in said selected group of containers during said portion of the day, wherein said selected group of containers has ~~[[having]]~~ said common time indicia, ~~according to said sequence during said particular time of day.~~

8. (Previously Presented) The coding system according to claim 7, wherein said time indicia includes at least one of:

a solar character indicating to said user that said products contained in said containers, having said solar character, are to be used during the day; and

a lunar character indicating to said user that said products contained in said containers, having said lunar character, are to be used during the evening.

9. (Previously Presented) The coding system according to claim 8,

wherein said sequence indicia includes a series of ascending numerical characters,  
wherein said series of ascending numerical characters indicates to said user of said  
products contained in said selected group of containers an order of using said products  
contained in said selected group of containers.

10. (Previously Presented) The coding system according to claim 9,  
wherein said coding system is disposed on a series of labels, wherein a selected one of  
said series of labels is attached to a respective containers.

11. (Currently Amended) A method of ~~determining a time and a sequence of~~  
~~use of~~ coordinated treatment using a series of products contained in a plurality of  
independent discrete containers, comprising the steps of:

[[assigning]] providing time indicia [[to]] on each [[product]] container of said  
series of products, [[wherein]] said time indicia [[indicates]] indicating to a user a [[time  
of]] portion of the day for using each product of said series of products and [[enables]]  
enabling the user to select a group of [[products]] containers of said series of products  
having a common time indicia for a particular [[time of]] portion of the day;

[[assigning a]] providing sequence indicia [[to]] on each [[product]] container of  
said series of products, [[wherein]] said sequence indicia [[indicates]] indicating to said  
user an order of using each product of said selected group of [[products]] conatiners of  
said series of products;

determining a [[time of]] portion of the day;

correlating said time indicia of each [[product]] container with said [[time of]]

portion of the day;

selecting a group of [[products]] containers from said series of products having a common time indicia relating to said determined [[time of]] portion of the day; and

using said products from said selected group of [[products]] containers having the common time indicia for said [[particular time of]] portion of the day in [[the order]] a sequence according to said [[sequential]] sequence indicia.

12. (Previously Presented) The method according to claim 11, wherein time indicia includes at least one of:

a solar character indicative of use of a product in the morning; and

a lunar character indicative of use of a product in the evening.

13. (Previously Presented) The method according to claim 12, wherein said selection of said group of products comprises selecting a group of products, from said series of products, having said solar character associated therewith.

14. (Original) The method according to claim 13, wherein said sequence indicia includes a series of numerically ascending numerals.

15. (Previously Presented) The method according to claim 14, wherein said use of said group of products having said solar character associated therewith comprises using said solar indicated group of products in ascending numerical order.

16. (Previously Presented) The method according to claim 15, further comprising the step of:

selecting a group of products, from said series of products, having lunar character associated therewith.

17. (Previously Presented) The method according to claim 16, wherein said use of said group of products having said lunar character associated therewith comprises using said lunar indicated group of products in ascending numerical order.
